## 3.1L Final Tier 4 Yanmar Module Installation Instructions

1) Gain access to injector connectors by lifting the cab. Remove the two nuts holding it down using a socket wrench with 18mm socket. Make sure to lift cab until it locks in the upright position.

**2)** Locate the two injector connectors to the right side of the hydraulic fluid tank as facing the front of the machinery.

**3)** Unplug the two factory injector connectors shown by pulling back on the lock tab and depressing the release just forward of the lock. One connector will be a 12 pin with yellow insert, the other 8 pin with a red insert.

4) Plug the female injector connectors from the ADS harness into factory injector controller. Match the pin count and color to the factory controller.

5) Plug the male ADS injector connectors into the factory female injector connectors. Again matching pin count and insert color.

**Note:** Insure connectors seat all the way with audible "click".

**6)** Route power and ground leads along factory wiring loom to the battery. Connect red wire with ring terminal to positive battery post. Connect the Black wire with ring terminal to negative battery post.

**7)** Mount the module with the connector on the bottom side, as to reduce the chance of moisture from getting into the module harness. Keep away from excessive heat and moving parts.

Note: Zip tie onto the factory computer wire harness works well. Mounting the module as shown will help prevent moisture from collecting into the module connector.
